PROJECT & OPERATIONAL KNOWLEDGE

Enterprise IT Support Frequently Asked Questions & Knowledge Base

Login & MFA Troubleshooting, GlobalProtect VPN, Hardware Docks, and License Provisioning

Classification: Internal **Version:** 3.0 **Owner:** Global IT Helpdesk **Support Hotline:** +1-888-273-9487 (x4357)

1. Login, Credentials, and Multi-Factor Authentication

Q1: How do I reset my expired or forgotten Okta password?

Navigate to `https://apex.okta.com` and click *"Need help signing in? -> Reset Password"*. Follow the verification prompt sent to your registered secondary authentication method. If your account is locked due to five (5) consecutive invalid attempts, contact the IT Helpdesk via Slack at `#help-it` or phone extension **x4357**.

Q2: What should I do if I lose or misplace my YubiKey hardware token?

Immediately report the lost YubiKey to IT Security via email (`security@apextech.internal`) so the token's cryptographic certificate can be revoked. Visit the IT Desktop Support bar in Building B (or request a replacement via the Self-Service Portal for remote employees) to be issued a temporary TOTP emergency bypass code and a replacement YubiKey.

2. Network Connectivity and GlobalProtect VPN

Q3: How do I connect to the corporate Wi-Fi in regional offices?

Select the **Enterprise-Secure** SSID. When prompted, select **WPA3 Enterprise (EAP-TLS)** authentication. Your pre-provisioned corporate MacBook or ThinkPad has the device machine certificate pre-installed; click *Connect* and trust the internal Root CA.

Q4: My GlobalProtect VPN fails to connect with "Gateway Not Reachable". What do I do?

Verify that your home broadband allows outbound UDP traffic on ports 4500 and 500 (IPsec). In the GlobalProtect menu, select *Settings -> Gateways* and toggle between `vpn-primary.apextech.com` and `vpn-secondary.apextech.com`. If issues persist, flush your local DNS cache (`sudo dscacheutil -flushcache` on macOS).

3. Hardware, Peripherals, and Software Licensing

Q5: My external dual monitors do not display when plugged into the USB-C dock.

Ensure the CalDigit TS4 docking station power brick is securely plugged in. On macOS, navigate to *System Settings -> Displays* and verify that *"Mirror Displays"* is disabled. On Windows, press `Win + P` and select *"Extend"*.

Q6: How do I request commercial software licenses (PyCharm Professional, Copilot, Figma)?

Visit the **Apex Self-Service Portal** (`https://software.internal.apextech.com`). Search for the requested tool and submit a license request. Approvals are automatically routed to your department manager; licenses are provisioned to your Okta dashboard within 4 hours of manager approval.

4. IT Helpdesk Contact Directory

> **IT Support Contact Channels & Operating Hours**
>
> - **Slack Helpdesk Channel:** `#help-it` (Monitored 24/7, response time < 15 mins).

> • **Email Support:** `it-support@apextech.internal`.
> • **Emergency Phone Line:** +1-888-273-9487 (Toll-Free) or internal extension **x4357** (HELP).
> • **Physical IT Genius Bar:** Building B, Floor 2 (Hours: 08:30 – 17:30 local hub time).
