Enterprise Knowledge Assistant: REST API Reference & Integration Guide

Endpoint Schemas, JWT Auth, RAG Query Payload, Response Envelopes, and Health Checks

Interface: OpenAPI 3.0 / REST	**Version:** 1.4	**Owner:** API Platform Engineering	**Base URL:** https://api.knowledge.internal.apextech.com/v1

1. Authentication and Base URLs

The Enterprise Knowledge Assistant API is exposed internally over HTTPS. All requests require authentication via an Okta-issued JSON Web Token (JWT) passed in the `Authorization` header:

```
Authorization: Bearer eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9...
Base URL: https://api.knowledge.internal.apextech.com/v1
```

2. Core Query Endpoint: POST /v1/query

Submits a natural language question against the enterprise knowledge base, returning a grounded response with source citations.

Request Payload

```
POST /v1/query HTTP/1.1
Content-Type: application/json

{
  "query": "Can a new employee work remotely during the first week?",
  "collections": ["HR", "SECURITY"],
  "top_k": 3,
  "include_citations": true
}
```

Response Payload (HTTP 200 OK)

```
{
  "status": "success",
  "data": {
    "query": "Can a new employee work remotely during the first week?",
    "answer": "No. Under the Apex Remote and Hybrid Work Policy (HR-POL-RMT-2026), newly hired employees are
    "confidence_score": 0.98,
    "citations": [
      {
        "document_name": "HR_Remote_Work_Policy.pdf",
        "document_ref": "HR-POL-RMT-2026",
        "section": "3. New Hire Remote Work Restriction",
        "page_number": 1,
        "score": 0.962
      },
      {
        "document_name": "HR_Onboarding_Guide.pdf",
